Vitamins to VEGA!

19th. December. 2024

VITAMIN | Vitamin K3, D3, VE 01

Recently, there is news in the market that a mainstream vitamin K3 manufacturer plans to overhaul equipment, and there are manufacturers to stop quoting. Due to the characteristics of K3 (dangerous goods, short validity period), the market channel inventory is limited, which is expected to lead to subsequent supply constraints and price rebound.

From the market feedback, on December 18, some domestic mainstream manufacturers raised the vitamin D3 500 feed grade quotation to USD80/KG.

From the market feedback, there are vitamin E manufacturers cancel the unexecuted contract, the VE channel inventory itself is at a very low level, pay attention to the market trend.

AMINO ACID | Lysine 02

The preliminary provisional duty of the EU anti-dumping duty on Chinese lysine has been published, and the tax rate is currently drawn up according to the dumping profit and the degree of damage to local enterprises. Among the two sample enterprises, Meihua is the highest, 84.8%; Eppen is lowest at 58.3%; BBKA, CJ, Fufeng, Dongxiao are 71.6%, other Chinese lysine enterprises that did not submit a response document are 84.8% tax. This is the preliminary tax rate, has not yet publicized the specific implementation time and whether retroactive, need to wait for subsequent official notice.

API | L-carnitine 03

Chengda Pharmaceutical recently said that the L-carnitine API has been reviewed by the pharmaceutical administration departments of many countries, and has obtained the European CEP certification, covering the quality system certification of the global mainstream market.

FOOD ADDITIVE | 04

The "Infant Intestinal Health Blue Book" was officially released in Beijing, prepared by the Nutrition Literacy Branch of China Association for Health Promotion and Education and supported by Royal Frieslandcampina of the Netherlands. The blue book summarized the status quo of research on infant gastrointestinal health, investigated the cognition of infant gastrointestinal health, clarified the common misunderstandings of infant caregivers on infant gastrointestinal health, and put forward suggestions and strategies for improvement, pointing out the benefits of milk protein, lactoferrin, oligosaccharides, natural milk fat and other nutrients on infant gastrointestinal health.
