Vitamins to VEGA!

20th. Jan. 2025

VITAMIN

01

Last week, the vitamin market as a whole remained stable, with small price changes for some products; VE factories in the domestic price increase after the rise in turnover; B6 has a second-tier manufacturers to raise prices, the market low-priced inventory to reduce; folic acid market low-priced inventory to be consumed, and the export of gradually accepting the high price, the procurement of active; VC manufacturers to lower the price of the order to sign the shipment, resulting in the lack of confidence of downstream users, the market price fell significantly; nicotinic acid nicotinamide by raw materials Nicotinic acid and nicotinamide by raw materials, prices fell, the market shipments actively.

AMINO ACID

02

Amino acid market last week: 98% lysine market factory offer is stable, mainly to deliver the previous orders, the overall market demand is slightly weak; threonine market transaction prices fell, prices remain high; methionine factory offer is stronger, the market enquiry increased, need to pay attention to the end user procurement situation.

API

03

Last week, the overall veterinary raw materials market remained stable, despite the approach of the Chinese New Year market demand is flat, but the factory price limit made the overall price is relatively stable. Tylenol and tilmicosin phosphate inquiry active, enrofloxacin / ciprofloxacin hydrochloride mainstream factories stop reporting, the willingness to increase prices is obvious, the later market conditions need to continue to pay attention to.

FOOD ADDITIVE

04

Last week, in food additives segment: sucralose domestic market transaction price was around 23.5usd/KG; acesulfame and aspartame price was stable. Creatine monohydrate was driven by the market, and the transaction price was stable at 3.85-4usd/KG, and the delivery schedule was scheduled to February. The price of L-carnitine series products is expected to rise in the long run. We will continue to pay attention to keep you update.
