Vitamins to VEGA!

19th. November. 2024

## VITAMIN

01

Recently, Huainan Xinhong Biotechnology Co., Ltd. was approved for the production license of D-biotin mixed feed additives. The production address is 200 meters west of the Management Committee of Panji Economic Development Zone, Pingxu Town, Panji District, Huainan City, Anhui Province. It is reported that Huainan Xinhong Biotechnology Co., Ltd. has already shipped feed-grade biotin.

## AMINO ACID

02

Methionine: The market is weak, the overall demand is average, and the market price is stable but weak. The methionine market is expected to be weak in the short term, and attention should be paid to the order signing situation of end users.

## API

03

Neomycin sulfate has maintained stable prices since the fourth quarter, and the domestic transaction price has risen slightly (traded at 160-170 yuan/billion). As the end of the year approaches, the market demand has risen to a certain extent, and the supply situation of mainstream factories is still tight. The subsequent price is expected to remain strong, and we will continue to pay attention to changes in demand in the foreign trade market.

## FOOD ADDITIVE

04

It is understood that the State Administration for Market Regulation (National Standards Administration) recently approved and released the mandatory national standard GB 44917-2024 "Hygienic Requirements for Bulk Transportation of Edible Vegetable Oils", which will be officially implemented on February 1, 2025. The standard defines the terminology for bulk transportation of edible vegetable oils and stipulates basic requirements for bulk transportation containers, cleaning, maintenance and management, transportation operations, records and other hygienic requirements. Bulk transportation containers for edible vegetable oils should be food-specific containers. The words "Edible oil only" or "Food only" should be clearly marked on the outside of the container. The inside and outside of the container should be clean and hygienic. Containers transporting non-food items should not transport edible vegetable oils. Flexitanks used for bulk transportation of edible vegetable oil are single-use containers and should not be reused.
