Vitamins to VEGA!

18th. December. 2024

VITAMIN I Vitamin B9, D3, B6

01

Folic acid: In the past two months, due to the upstream manufacturers continue to stop reporting and limit the implementation of low-price contracts, and the market channel side generally adopts a reluctant sale strategy, resulting in a steady rise in the transaction price of folic acid market. FOB export prices have risen to \$40-45, and even individual export orders have reached \$50. According to the feedback of upstream manufacturers, the current shortage of trichloroacetone raw materials is more serious, and the raw material reserves of folic acid factories are generally insufficient, which may greatly limit the supply of folic acid for a long time in the future.

Vitamin D3: Since last week, the transaction price of the D3 market has shown an overall gradual upward trend. So far in terms of exports, FOB transaction price is about USD32-35/KG.

B6: According to market news feedback, on December 17, the factory offer of domestic feed-grade vitamin B6 was raised to USD25.8 /KG.

AMINO ACID I Arginine

02

The market price of arginine is down, the trade market price is about USD3.2/KG, the domestic end user demand is flat, on-demand procurement, the overall market transaction is weak, it is expected that the arginine market is weak in the short term.

API I Tylosin, Tilmicosin

03

Tylosin, Tilmicosin phosphate, the mainstream factory normal quotation, before the end of the year at home and abroad the terminal orders have basically settled, and the average price of pigs in the market breeding terminal is declining, the price is about to be adjusted, please pay attention.

The price of Tylosin Tartrate is USD27/KG, and the price of Tilmicosin phosphate is near USD32.6/KG.

FOOD ADDITIVE I

04

A few days ago, Baoling Bao announced that the company intends to invest in the construction of functional sugar (alcohol) projects in the United States by increasing the capital of its wholly-owned subsidiaries to no more than 622 million yuan. The project is planned to complete construction and production within 36 months, and it is expected that the functional sugar (alcohol) capacity will be added by 30,000 tons/year after reaching the completion.
