

VEGA DAILY

Vitamins to VEGA!

5th. July. 2024

VITAMIN

01

Driven by the price increase of some vitamin products and the fact that calcium pantothenate is at an extremely low level and its price is on the edge of the industry's loss line (some companies are already making losses), market attention has begun to increase since this week, and downstream customers have increased their precautions and inventory reserves for calcium pantothenate products; as of now, some manufacturers have begun to stop signing orders or limit the number of orders signed.

AMINO ACID

02

Shouguang Golden Corn Biotechnology Co., Ltd. proposed a project to produce 200,000 tons of lysine annually: the project utilizes part of the original workshops, builds a new workshop with a construction area of approximately 16,600 square meters, and purchases fermentation tanks, fluidized beds, evaporators and other production and supporting equipment.

API

03

Doxycycline hydrochloride: The mainstream factories still stopped reporting this week, and the current market price is USD43-43.8/KG. The current market inventory is limited and the market is reluctant to sell. The market is hot and is expected to remain strong in the future. Please pay attention.

FOOD ADDITIVE

04

Recently, the food additive aspartame has been affected by market demand, and the market transaction price is around USD 9.5-10/KG. It is expected that the price will remain stable in the future.
