Vitamins to VEGA !

8th. July. 2024

## VITAMIN

01

Last week, the vitamin market continued to be hot, and many varieties stopped quoting or increased in price: Vitamin D3 was in short supply, factories stopped quoting, traders were reluctant to sell, market prices jumped, and prices have doubled; Vitamin K3, domestic market procurement and sales were active, prices rose; VE quotations were firm, and market transaction prices continued to rise; vitamin B1 market low-priced inventory was consumed, and transaction prices moved up; the raw material of calcium pantothenate rose, and some manufacturers stopped quoting after the price hit bottom, and prices rebounded slightly; VB6 and VB3 market attention increased.

## AMINO ACID

02

Last week, the factory quotations of lysine remained strong, the number of inquiries in the trade market increased, and the factory delivery was tight. In July and August, most factories stopped production for maintenance, resulting in less spot goods in the market and tight factory delivery time. It is expected that the market price will remain strong in the short term; the price of threonine increased this week, and manufacturers controlled the supply. There were fewer spot goods in the market, and the supply was tight. The methionine market was slightly weak, and the quotations of manufacturers and the trade market were slightly lowered. There were fewer transactions. It is expected that the overall market will be weak in the later period.

## API

03

Last week, the veterinary drug raw material market was generally stable, with no significant changes in market supply and demand, and most varieties maintained rigid demand purchases. Due to the suspension of production and maintenance, the supply of some varieties was limited, and the price trend was steadily upward. Doxycycline, tylosin, tylosin, and lincomycin received high market attention, and inquiries were active; the prices of florfenicol, amoxicillin, and OTC fluctuated and adjusted.

## FOOD ADDITIVE

04

Recently, the price of sweeteners has been stable. The price of acesulfame potassium has increased slightly, and the delivery is normal. Some domestic manufacturers of sports nutrition products such as creatine monohydrate have scheduled their shipments until late July, and the forward price is likely to decline.

## MINERAL

05

The price of ore raw materials remained stable last week. Affected by the rainy season in the south, mining capacity was limited, and the sulfuric acid plant was shut down for maintenance. The market price is expected to increase slightly.
