

# VEGA DAILY

Vitamins to VEGA!

22th. July, 2024

## VITAMIN | Vitamins

01

Last week, the vitamin market continued to rise. After a few days of stability, VD3 price boom, the factory stopped quotation, the channel is reluctant to sell, available stock was lacked; VE raised prices significantly, and customers actively purchased; K3 delivery is tight, the factory is still stopped quotation, and the market transaction has further risen; For B6, some manufacturers resumed the quotation, slightly increased the price, and the transaction price moved up; B1 factory raised the price, the market attention increased, and the transaction price moved up.

## AMINO ACID | Amino Acid

02

This week, the overall trend of amino acids is stable, the valine factory's quotation is firm at around USD1.75/kg, the market transaction is slowing down, the end user resupplies a small amount, the customers are mostly waiting to see market trend, and the subsequent attention is paid to the factory production and order situation. The tryptophan market supply is tight, but the market transaction is still not good, and the enquiry is not positive. It is expected that the late market will be stable. Isoleucine bottom hovering, but the soybean meal price will continue to be low, and the downstream bearish future market is expected to be weak in the short term.

## API |

03

Last week, the overall market of veterinary drug raw materials ran smoothly, and there was no significant change in market supply and demand, and most varieties remained purchase on demand. For doxycycline and lincomycin, after the early supply limited, the price still maintained a strong trend. Tilmicosin series were suspended due to the impact of raw materials, and the price is expected to be increased. Other products such as florfenicol, oxytetracycline, neomycin and other prices are basically stable. Continue to pay attention to market changes in the later stage.

## FOOD ADDITIVE |

04

This week, the price of sucralose/Acesulfamil/aspartame sweetener series products in the food add plate shipped smoothly; Creatine monohydrate mainstream manufacturers normal shipment, some factory delivery have scheduled to the end of July, the domestic market transaction price of USD4.67-4.92/KG; Preservative products sodium benzoate/Benzoic acid/potassium sorbate/sorbate prices remain stable, manufacturers deliver normally; Thickening agent products xanthan gum affected by the market at present, the domestic market is stable and the follow-up price is still bullish, and the delivery is expected to be in mid-to-late July. Will continue to pay attention to the market situation and the delivery of each manufacturer.
